We Build Confidence

AS A CYCLIST, YOU'RE IN A RACE. EVEN IF YOU'RE A MILD-MANNERED RECREATIONAL CYCLIST, YOU'RE IN IT. THE RACE IS FOR NEW TECHNOLOGY.

A HUNDRED YEARS AGO, BICYCLES WERE MADE OF WOOD. RIDICULOUS? NOT WHEN YOU THINK OF OTHER THINGS, ORIGINALLY MADE OF WOOD, THAT TODAY WE REGARD ONLY IN TERMS OF MODERN MATERIALS: TENNIS RACQUETS, GOLF CLUBS, CANOES, CAR CHASSIS, EVEN FALSE TEETH. FIRST, STEEL REPLACED WOOD, AND NOW STEEL IS BEING CHALLENGED BY ALUMINUM, PLASTICS, CARBON AND BORON FIBERS, TITANIUM...AND MORE WILL COME.

BUT AS TECHNOLOGY PRODUCES NEW MATERIALS AND NEW USES, CYCLISTS IN PARTICULAR WILL BE WELL ADVISED TO VIEW THEM WITH SUSPICION. MANY MANUFACTURERS ARE SIMPLY EXPLOITING TECHNOLOGY. THEY HAVE QUICKLY TRADED ON THE INHERENT QUALITIES OF NEW MATERIALS WITHOUT REGARD FOR THEIR SPECIFIC APPLICATION TO BICYCLES. AND THEY'VE MADE MANY PRODUCTS THAT HAVE FAILED IN ACTUAL USE.

HISTORY TEACHES US THAT THE REALLY WORTHWHILE CHANGES IN BICYCLE DESIGN ARE EVOLUTIONARY—NOT REVOLUTIONARY. TO UNDERSTAND THE EXACT PROPERTIES OF NEW MATERIALS AND HOW THEY BEHAVE UNDER ALL CONDITIONS TAKES TIME AND TESTING.

WE HAVE BEEN TAKING THE TIME. WE ARE TESTING NEW MATERIALS. AND RETESTING. OFTEN TO THE FRUSTRATION OF OUR SALES-People. BUT WE WON'T BE RUSHED. WE CAN'T. WE HAVE A CORPORATE PHILOSOPHY THAT SIMPLY DOES NOT PERMIT FAILURE. WE BEGIN EVERY WORKDAY WITH A 100-YEAR-OLD MANDATE TO BUILD THE VERY BEST BICYCLES WE CAN. WE TAKE IT SERIOUSLY. AND BY DOING SO, WE HAVE BUILT A TRUST WITH CUSTOMERS WE SIMPLY WILL NOT PUT AT RISK.

ONLY WHEN WE ARE ABSOLUTELY CERTAIN THAT NEW TECHNOLOGY AND NEW MATERIALS CAN IMPROVE THE VALUE, PERFORMANCE AND RELIABILITY OF OUR BICYCLES WILL WE USE THEM. AND THEN WE'LL BACK THAT DECISION WITH OUR LIFETIME GUARANTEE.

WHERE THE BICYCLES IN THIS CATALOG ARE MADE, THERE IS ONLY ONE WORD FOR QUALITY: MIYATA.

OUR MANDATE TO BUILD THE VERY BEST BICYCLES WE CAN DATES FROM 1890.

Cr-Mo STB

STB: THE WORLD'S FINEST CHROMOLY BICYCLES.

The ongoing process of building the world's most reliable production bicycles led Miyata to the development of STB tubing.

As our research on frame stress revealed a clearer picture of how vibration and shock can tear frames apart, we learned how to better keep them together. We knew that making the tubes thicker at maximum stress points would create a stronger, more reliable bicycle—also a heavier one. But our picture showed us where frames receive very little stress as well. We found we could save the added weight of reinforcement by reducing tube thicknesses at low stress points. We were “double butting” our frames—making the tubes thicker on the ends where they butt together, thin in the middle where there was very little stress.

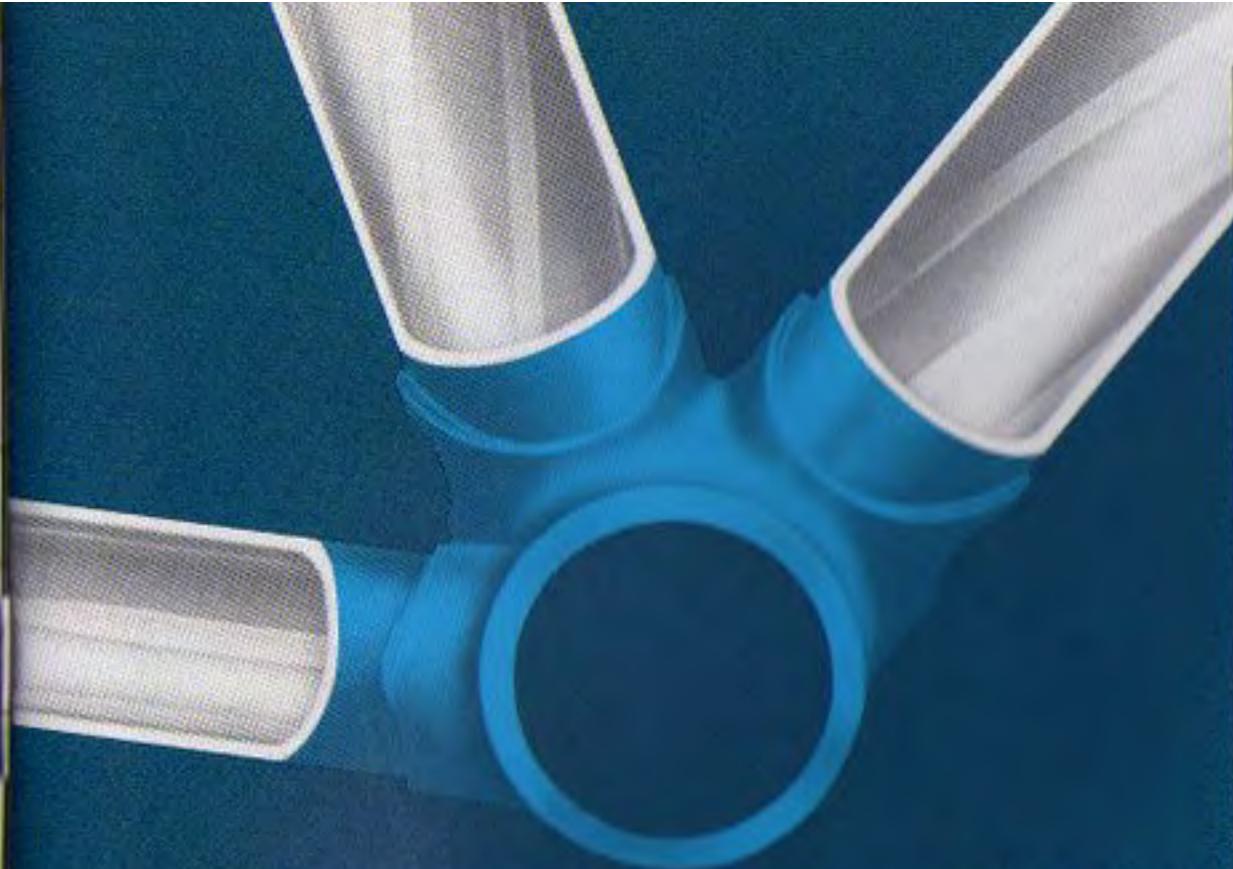

But the ends don't receive equal stress, so why should they be the same thickness? They shouldn't. The solution is “triple butting.” Three thicknesses: a different thickness at each end, one thinner in the middle. Each of the three main tubes in the frame, depending on its precise stress load, could be butted in different relationships.

Tube manufacturers couldn't (or at that time wouldn't) provide that kind of accuracy, so in 1981 we built our own tubing mill. We were, and are, the only manufacturer to draw our own tubes. And, as a result, the first to triple-butt our frames.

Alas, our mandate to build the world's most reliable production bicycles wouldn't permit us to rest on our laurels for very long.

Additional research revealed that the most destructive form of stress to the frame was not vibration or vertical loading (hitting a bump) but torsion stress. Stress created when a 175 lb. cyclist gets off the saddle and hammers for the line—or when a recreational rider wants to get across a busy highway quickly. The twisting, side-to-side motion of hard pedaling can tear a frame apart.

Our answer was to minimize the tube's ability to twist by adding ridges of steel run-

STB CREATES THE STRONGEST BOTTOM-BRACKET SHELL WE'VE TESTED.

load—e.g., twist the ridges around the interior wall of the tube. The ridge of steel is called a spline, and it was so effective in resisting torsion stress, that the tube's thickness could be reduced even more. Allowing us to take additional weight out of the frame. Splined, triple-butted tubing—STB—is light, stiff, strong and matched exactly to the dynamics of the frame. And it's a Miyata exclusive.

But there's more to creating a superior chromoly bicycle than making superior tubing. There's assembly to consider. And proper assembly requires special controls to insure that the frame's strength is not compromised.

First, our tubes are carefully mitered to maintain accurate frame geometry. Then we join the tubes with investment-cast lugs. Long, precisely tapered points on the lugs are more than show, they actually transfer stress from the joint to the reinforced part of the tube. And the lug's accuracy ($\pm .03\text{mm}$) eliminates the possibility that gaps will form in the joints during brazing.

Brazing temperatures are the most critical control to maintaining frame integrity. So critical in fact, we entrust this step only to computers. They're never distracted by fellow workers or by problems at home. At Miyata, computerized machines infallibly grasp, align and braze our STB frames in repetitious perfection. Thus destroying the hand-crafted myth perpetuated by frame-builders who have failed to make a commitment to advanced methods of production.

APA—ALUMINUM-PRESSURIZED-ADHESIVE BONDING. AN EVOLUTIONARY DISCOVERY.

When you already build the world's finest steel frames, why seek alternatives? Because the finest steel frame was never our goal—building the finest bicycle is.

The major problem with optimal bicycle performance is the motor. Its power source is (in most cases) a human being, so to improve performance we have to minimize factors that wear out the engine.

Cyclists expend most of their energy two ways: overcoming resistance and absorbing vibration. Obviously, materials that reduce resistance and vibration will reduce energy loss. Aluminum can be an excellent choice.

Aluminum frames are 20% lighter and 12% stiffer than steel frames. Extra stiffness improves the cyclist's efficiency—power that is otherwise lost in a frame that flexes from the forces of pedaling is now transferred directly to the wheels. Less weight translates into less resistance—a given amount of energy will propel a light bicycle either farther or faster than a heavy one.

The other major advantage to aluminum is its ability to absorb road shock and dampen vibration. Aside from discomfort, vibration and shock rob the cyclist of energy, just as surely as foot-strike fatigues a runner or repeated jabbing wears down a fighter. Aluminum tubing dampens shock 50% faster than steel, so most of it never reaches the rider.

Another benefit of aluminum is its ability to resist oxidation. Nearly six times greater than steel. Which means your bicycle will stay better looking and stronger longer.

Aluminum isn't new. So why haven't we been making bicycles out of aluminum all along? Until the development of aerospace adhesives, the only way to build an aluminum bicycle was to weld it. The resulting loss of strength and alignment with conventional welding methods was, to us, simply unacceptable. The loss of two such critical components in a frame maintained chromoly's edge as a superior material.

In addition, aluminum has always

been more expensive. So until a good bonding method was available, aluminum was a high-risk, high-cost, poor alternative. Until now.

Miyata has applied for a patent on a method called APA bonding. Aluminum-Pressurized-Adhesive bonding. A process requiring precision-cast, light-alloy lugs made to tolerances of $3/100\text{mm}$. A special adhesive is applied to the lug and tube, then they are held under pressure while the joint is heated to $150^\circ\text{ centigrade}$. Heat, acting as the catalyst, creates a chemical reaction in the joint, producing a permanent friction coefficient of 300 kgs/cm^2 between the two parts. That means the tube or the lug will break before the glue-line will.

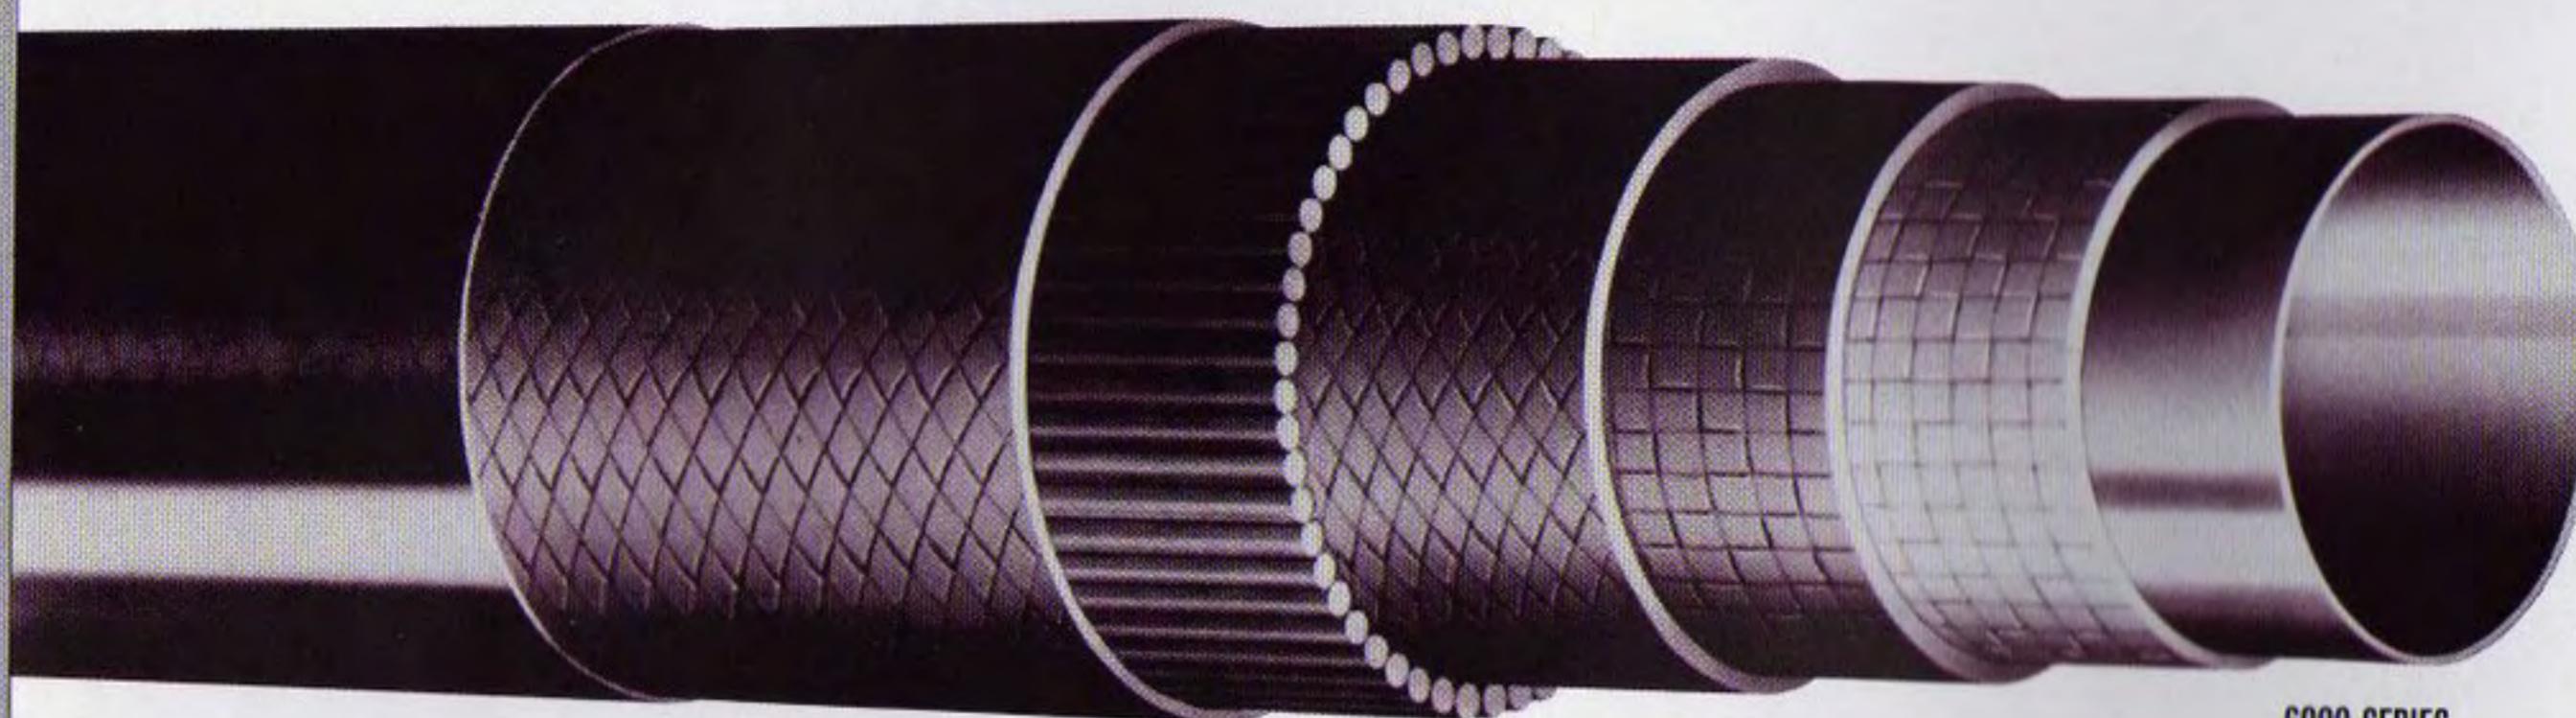

This method of bonding has proved so superior we have modified our carbon fiber tubes to allow the use of the APA bonding process. The charts show how our bonds hold up to stress and vibration.

The future will no doubt show a greater emphasis on aluminum bicycles

Carbon fiber. Stronger than steel. Lighter than aluminum. And, in the hands of the finest production frame maker in the world, material you'd expect to result in some pretty spectacular bicycles. Miyata's three carbon fiber models will not disappoint you. Road ready, they weigh in at scarcely 18.5 pounds. They'll give you a ride unlike anything you've ever experienced.

To appreciate just how well Miyata has adapted this space-age fabric to a hundred-year tradition of frame building, you should know something about carbon fiber.

What is carbon fiber?

All organic matter contains carbon. A carbon fiber is an organic thread that is heated in a nitrogen-gas environment and reduced to a pure-carbon state. The thread emerges as a tiny rod of carbon with the basic properties of uncooked linguini: very stiff, very strong when you pull on the ends, but easy to break if you snap it in the middle. There is a recipe to overcome that obvious disadvantage: impregnating the rods in resin "blankets." Layers and layers of the blankets, positioned at opposing angles, are then formed into tubes.

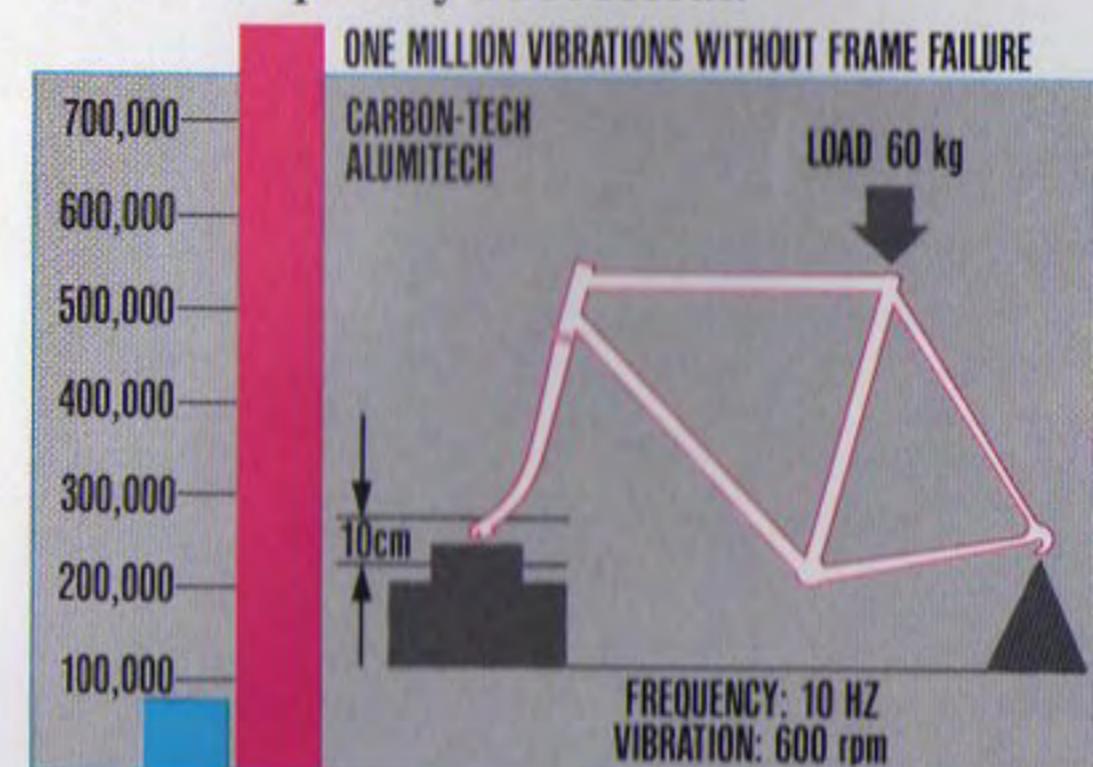

Why is carbon fiber so irresistible to frame builders?

Aside from the fact that it is stronger and lighter than metals, carbon fiber has the wonderful ability to absorb vibration and

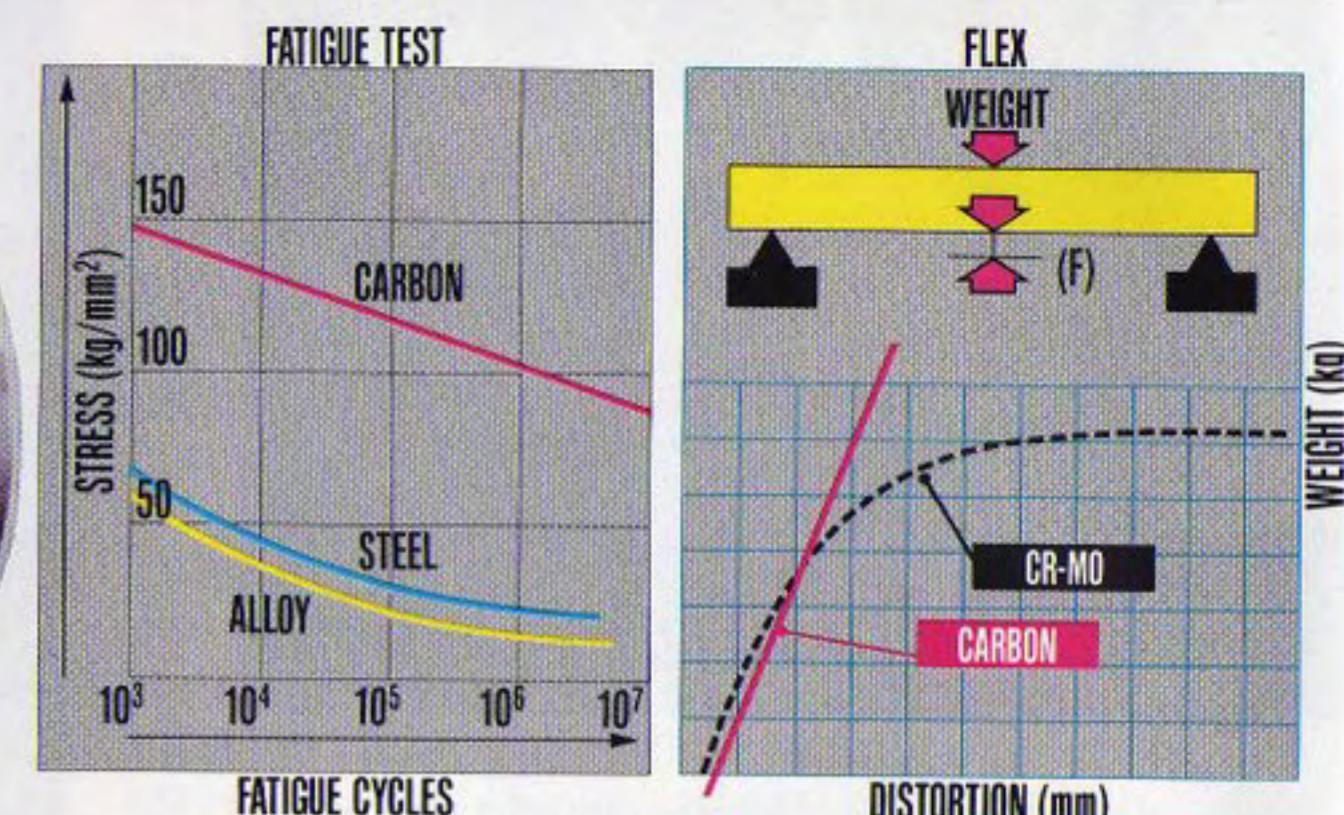

dampen shock. So it minimizes fatigue to the frame materials and to the cyclist. Because steel holds onto a shock wave longer, it will be transmitted to the cyclist at higher amplitude. And, since shock waves and vibrations are a constant condition of cycling, the rider will tire more quickly.

But carbon fiber has always presented frustrations as well:

How to permanently bond the tubes into a reliable frame—joining two alien materials, carbon tubes and aluminum lugs, has never been completely successful.

How to eliminate the battery effect created when carbon and aluminum touch in a humid environment. Corrosion from the battery eats the surface of the two materials and the bond fails.

How to minimize the tubing's vulnerability to lateral stress without making the tube too heavy.

Miyata has a deceptively simple solution: laying our carbon-fiber blankets around a thin core of aluminum that is protected from contact with the carbon.

It solves a number of problems:

The aluminum-to-aluminum APA bond is stronger than the tubing itself.

The aluminum can be more effectively isolated from the carbon fiber, thus disconnecting the battery.

The tube's lateral strength is greatly increased.

The benefits to cyclists are bicycle frames that tested 600% stronger than the competition's frames.

Bicycles with frames 20% stiffer than the stiffest chromoly frames, yet 40% lighter.

Bicycles that filter out harsh pavement while still communicating essential road information to the rider.

Bicycles that absorb vibrations to conserve the cyclist's energy.

Bicycles that are a new generation of reliable, light, responsive ultra-performers.

Carbon-Tech with APA bonding: the first carbon bicycles guaranteed for life.

AN INTELLIGENT CHOICE FOR TRULY COMPETITIVE, OR JUST HIGHLY AGGRESSIVE RIDERS. THIS IS A STRONG, RESPONSIVE ATB WITH LIGHTNESS FOR CLIMBING AND TOUGHNESS FOR DOWNHILL BOMBING. FULL CHROMOLY STB TUBES AND FORK. 72/73 GEOMETRY AND NEW DEORE II COMPONENTS GIVE YOU PROFESSIONAL-LEVEL PERFORMANCE AND RELIABILITY WITH A MORE CASUAL APPROACH TO PRICE.

Terrarunner

LIKE CLIMBING? THE TRAIL RUNNER'S LIGHT, ALUMINUM FRAME AND 21-GEAR CYCLOID POWER TRAIN COULD PUT YOU ON A GRANITE FACE WITH THE BEST FREE-CLIMBERS. 3-LUG FRAME CONSTRUCTION WILL EASILY SURVIVE THE PLUNGE BACK TO YOUR BASE CAMP. NEW BB SHELL DESIGN KEEPS CHAIN STAYS TRACKING STRAIGHT UNDER STRESS, WHILE VERTICAL DROPOUTS LOCK THE REAR WHEEL IN LINE FOR OPTIMAL PERFORMANCE.

Trailrunner

LOADED WITH POPULAR FEATURES, THIS SPIRITED ATB DELIVERS AN AGILE, BALANCED RIDE THAT LIVES UP TO ITS NAME. THE MECHANICAL ADVANTAGE OF BIOPACE CRANKS WILL ADD SERIOUS HILL-CLIMBING ABILITY TO THE MOST CASUAL RIDERS, AND INDEXED SHIFTERS WILL LET THEM USE ALL 18 GEARS. JUNIOR MODEL WITH 24-INCH WHEELS BRINGS FAT-TIRE FUN TO THE YOUNG AS WELL AS YOUNG AT HEART.

Sportrunner

Parkrunner

NOT AS TAME AS IT SOUNDS—REMEMBER, THE BADLANDS IS A PARK. THIS ATB STILL GIVES YOU A TREMENDOUS MECHANICAL ADVANTAGE TO TAKE ON ROUGH TERRAIN.

IN MORE CIVILIZED SURROUNDINGS, YOU'LL APPRECIATE HOW ALL THE HEAVY-DUTY FEATURES TRANSLATE INTO TROUBLE-FREE, COMFORTABLE CRUISIN'. ITS WIDE FOOTPRINT AND RELAXED GEOMETRY WILL BOLSTER THE CONFIDENCE OF ALL FIRST-TIME ATB CYCLISTS.

FEATURES:
SPECIAL STEEL TUBES
SUNTOUR ACCUSHIFT
6-SPEED/SINGLE CRANK
"BAREFOOT" PEDALS
ALLOY RIMS
STAINLESS STEEL SPOKES
CRUISER SADDLE

Unicycles

Tires

ATB

BUILT TO WITHSTAND MORE PUNISHMENT THAN YOU CAN. WE OFFER A TIRE DESIGN FOR EVERY ATB APPLICATION: FULL OFF-ROAD FAT TRAX WITH NARROW TREAD DESIGN FOR MORE RESPONSIVE HANDLING; IBEX CENTER-RIDGE CITY TIRES FOR A SMOOTH RIDE THAT QUIETLY DISGUISES ITS COUNTRY COUSIN'S TOLERANCE FOR ABUSE.

OFF-ROAD TIRES: 26 x 1.95, 26 x 2.00, 26 x 1.9; IBEX II: 26 x 2.02; CRUISER GSW: 26 x 2.15; 60 PSI.

TOURING CLINCHERS

FINALLY, TOURING TIRES WITH THE HIGH COMFORT OF LOW-PRESSURE TIRES AND THE LOW RESISTANCE OF HIGH-PRESSURE TIRES. OUR DUAL-HARD TREAD DESIGN GIVES YOU BOTH: 80 LBS. OF PRESSURE THAT RIDES LIKE 110 LBS. NYLON-BELTED RADIALS PACKED WITH EXTRA CORDS FOR LONGER TIRE LIFE, LONGER TUBE LIFE, AND MORE PUNCTURE RESISTANCE.

DUAL-HARD TREAD RADIALS: 700 x 32, 27 x 1 1/4; 80 PSI.

SPORT

GREAT VALUE, YOU'LL GET A LOT OF QUALITY FOR A MODERATE PRICE WITH OUR MULTIPURPOSE SPORT CLINCHERS.

SSW, 27 x 1 1/4; GSW, 27 x 1 1/4; 90 PSI.

TUBULARS

GET THE BENEFITS OF LOW WEIGHT, LOW ROLLING RESISTANCE AND LOW PRICE. THESE ITALIAN-MADE TUBULARS BY THE SAME MANUFACTURER OF COLNAGO'S TEAM RACING TIRE ARE THE PERFECT COMPLEMENT TO OUR CUSTOM-WHEEL PROGRAM.

COMMITALIA BASIC
COMMITALIA BIT 300,
120 PSI

RACING CLINCHERS

THERE'S NO ARGUMENT THAT SMOOTH TIRES GIVE THE LEAST ROLLING RESISTANCE POSSIBLE. AND OURS DO IT WHETHER THE WEATHER'S WET OR DRY. CHOOSE THE NEW TECHNOVA SIPING THAT CHANNELS WATER AWAY FROM THE CONTACT SURFACE, OR THE CENTER-RIDGE TREAD THAT ADDS A BIT MORE GRIP WITH MINIMAL ADDED RESISTANCE, FOR THE FASTEST, SUREST TIRES ROLLING.

NEW TECHNOVA SIPING: 700 x 20, 700 x 25; CENTER-RIDGE #7 TREAD: 700 x 25; 110 PSI

CYCLOCROSS

NEW GENERATION TIRE FOR AN EMERGING CLASS OF BICYCLE COMPETITION AND FUN. THIS HYBRID OF SPORT-TOURING AND ATB GIVES YOU A SENSIBLE BALANCE OF LIGHTNESS, DURABILITY, SPEED AND TRACTION.

CROSS COUNTRY CLINCHER,
100 x 35; 80 PSI

The Miyata Bicycle Warranty

- A. Miyata bicycle frames and front forks are warranted to be free from defect in materials and workmanship under normal use of the bicycle for the lifetime of the bicycle, except in cases specified in Warranty Exclusions.
- B. Miyata warranties, for one year from date of sale, all parts except wearing parts (tires, tubes, cables, grips, spokes, bar tapes, brake pads, toe clips, straps, small screws and nuts), frame and fork. This does not include items specified in the Warranty Exclusions.
- C. During the warranty period, all parts, as determined by Miyata, found to be defective in workmanship or material will be repaired or replaced free of charge, except for shipping and dealer labor charges (if applicable). This applies to parts, frame and front fork.
- D. Return of the Warranty registration card to Miyata is a condition precedent to coverage under this warranty. The warranty registration card must be returned to Miyata to validate warranty.

How to Claim Warranty

- A. All claims made under this warranty must be made through an authorized Miyata dealer during the relevant warranty period. To obtain warranty service, the owner must return the defective bicycle to an authorized Miyata

dealer for inspection with the sales receipt (or other evidence showing the date of purchase) and the owner record in the owner's handbook or owner's manual.

B. If the original dealer is no longer available or is inconveniently located, the name of the authorized dealer nearest to you can be obtained from Miyata whose address is stated below.

Warranty Exclusions

- A. This warranty covers only the original retail purchaser of the bicycle and is not transferable.
- B. This warranty does not cover failure due to accident, abuse, misuse, neglect, normal wear and tear, normal paint fading or chrome rust, improper assembly, improper fit, improper maintenance or use of unauthorized replacement parts.
- C. This warranty does not cover any personal injuries, damage or failure of bicycle if used in any competitive event, including bicycle racing, bicycle motocross, stunt or similar activities or when used in training for the same. Motors or other accessories inconsistent with the use intended by Miyata will negate this warranty.
- D. This warranty is expressly in lieu of any other warranty and any implied warranty of merchantability or fitness for any purpose is limited in duration to the

duration of this express warranty. Miyata shall not be responsible for any consequential or incidental damages.

E. Some states do not allow limitation on how long implied warranty lasts or the exclusion or limitation of incidental or consequential damages, so the above limitation may not apply to you.

F. This warranty does give you specific legal rights, and you also may have other rights which vary from state to state.

G. This warranty does not cover failure due to unlawful acts. H. Failure to maintain Miyata-requested periodic inspections may invalidate this warranty if such failure can be shown to have contributed to the warranty problem.

I. This warranty is void when the bicycle is used by many and unspecific persons such as rent-a-bicycle businesses.

J. This warranty does not cover failure due to earth-

quake, lightning, fire, flood, public hazard, and man-made or natural calamity.

K. This warranty does not cover natural phenomena

which result from operation of the bicycle, such as

vibrations or sounds.

L. This warranty is void when items outlined in the "Owner's Responsibilities" section are not observed.
