## Nice Olmo frameset

This bike was used by a former french racer of the Cote d'Azur in the 1980'. He has keep it until now, and sell to me.

I looks a lot like the Sintex Olmo model (engraved Olmo name on bottom bracket, base, rear bridge...)

The bike was paired with a 1986 C record groupset, if it could give some dating indications...

I have too many bikes unfortunetely and this one is a little short for me...(I sell all the pieces by the way)

Olmo team model, it looks like the Olmo Sintex model  
Made of Columbus tubing, certainly SL, perhaps SLX ?  
Columbus dropouts

Size : 54 center/center (seattube and toptube)  
original seatbolt included (not in photo, sorry...)

*The frame is weighing circa 1900 g without fork*

*The chromes are not perfect but really good, except an area under the fork crown. I have even not refurbished ti with OO fiber...*

*There is a lot of little chips on the frame, a lot have been repainted.*
